About	Product designer who builds AI-powered product experiences. Design background with hands-on technical experience.
Skills	Product Design · Interaction Design · Electronics Prototyping · Software Development
Technologies	JavaScript · Multi-modal AI · LLMs · RAG · Embeddings
Tools	Figma · Arduino · ProtoPie · Claude

Experience

Jan 2024 – Present

Founder · Junier (junier.co)

- Designed and built AI-tool for product research from scratch as an independent founder.
- Developed real-time session features for product feedback collection, including recording, prototype integrations, transcription and **live AI-assistance**.
- Built **multi-modal AI pipeline** (video processing, embeddings, RAG, LLMs) connecting user feedback to product characteristics.
- Built third-party tool integrations (Figma, Browser, MCP), enabling designers to get **contextual AI generated insights** based on their work.

Aug 2020 – Dec 2023

Design Technologist · Moodagent, Copenhagen

- Drove exploration of novel product opportunities and features through design and end-to-end prototyping in a cross-functional team, applying AI (audio classification, vision, embeddings) across multiple projects. One concept was **patented** and some **attracted new investor interest.**
- Independently built tool for qualitative evaluation of internal video-to-music AI models and feedback collection for model training. Grew into a **tool used by several teams** in transition from prototype to production.
- **Presented prototypes** to founders, senior leadership, and external partners.
- Redesigned interactive music playlist feature to focus on **AI-enabled content discovery,** which was later added to the product.
- Adapted the core mobile app experience for desktop and 3rd party devices, **expanding the product to new platforms.**

Education

BSc, Interaction Design Aalborg University, Aalborg 2015 – 2018
